

**Unit 6A Interdependence and Adaption.**

**Year 6.**

**2. Animals and Plants in a Different Habitat.**

**Activities:** Extend the children's understanding by studying a contrasting habitat which may not be in their locality. If a visit is not possible, (first hand experience is far better), use secondary sources to identify the plants and animals that live there. As above, use the knowledge gained to make information cards. Different groups target different organisms so that again a full picture will be created.

**Outcomes:** Name some animals and plants found in the habitat  
Identify features of animals and plants which make them suited to their habitat. eg: long legs for wading birds, bladders to make seaweed float.

**Objectives:**

- that different animals and plants are found in different habitats
- how animals and plants in a second habitat are suited to their environment.
